Food and Waterborne Diseases

Food and waterborne illnesses are conditions caused by eating or drinking food or water that is contaminated by microorganisms or the toxins they produce. It typically causes gastrointestinal symptoms such as abdominal pain, nausea, vomiting, and diarrhea. The mode of transmission is fecal-oral route. This summary report presents routinely collected FWBD data for the period of January 1 to April 27, 2019 (Table 1).

PIDSR Case Definition for Food and Waterborne Diseases

### Acute Bloody Diarrhea (ABD)
- **Reported Case**: A person with acute diarrhea with visible blood in the stool.

### Cholera
- **Suspected Case**: Disease unknown in the area: A person aged 5 years or more with severe dehydration or who died from acute watery diarrhea, OR
- **Suspected Case**: Disease endemic in the area: A person aged 5 years or more with acute watery diarrhea with or without vomiting, OR
- **Confirmed Case**: In an area where there is a cholera epidemic: A person with acute watery diarrhea, with or without vomiting.

### Rotavirus
- **Suspected Case**: A child <5 years of age who undergoes treatment (means that the child received intravenous rehydration therapy while undergoing observation at the Emergency Room OR was admitted in a hospital ward) for acute diarrhea (passage of 3 or more watery stools within a 24-hour period for < 14 days) in a participating hospital.

### Hepatitis A
- **Suspected Case**: A person with acute illness characterized by acute jaundice, dark urine, loss of appetite, body weakness, extreme fatigue and right upper quadrant tenderness.

### Typhoid Fever
- **Suspected Case**: A person with an illness characterized by insidious onset of sustained fever, headache, malaise, anorexia, relative bradycardia, constipation or diarrhea, and non-productive cough.

I. Acute Bloody Diarrhea (ABD)

Trend in the Philippines

A total of 4,606 acute bloody diarrhea cases were reported nationwide from January 1 to April 27, 2019. The distribution of cases for 2019 compared to epidemic and alert thresholds is shown below (Figure 1).

![Figure 1. Reported Acute Bloody Diarrhea Cases by Morbidity Week as of January 1 - April 27, 2019 (N=4,606)](image)

Geographical Distribution

There was a 34% decrease of reported ABD cases from 6,946 cases in 2018 to 4,606 cases in 2019 for the same period (January 1 – April 27, 2019). Most of the reported cases were from the following regions: Region VII (1,546 or 34%), Region IX (699 or 15%), CARAGA (665 or 14%), and CAR (415 or 9%) (Table 2).

Total percentages may not add up to 100 due to rounding off of figures. A PDF file of this report is available at www.doh.gov.ph/statistics.
Profile of Cases

Almost equal distribution of reported ABD cases in males (2,284 or 50%) and females (2,322 or 50%) was noted. Age of cases ranged from less than 1 month to 102 years old (median age of 10 years). The most affected age group was 1 year to 4 years (1,281 or 28%) (Figure 2).

Figure 2. Acute Bloody Diarrhea Cases by Age Group and Sex (N=4,606)
Philippines, January 1 to April 27, 2019

Laboratory Results

A total of 3,187 (69%) samples were collected for laboratory testing (Figure 3). Of these, 2,701 (85%) yielded positive for different organisms. The frequently identified organism was *Entamoeba histolytica* (2,314 or 86%) (Table 3).

II. Cholera

Trend in the Philippines

A total of 2,365 reported cholera cases were reported nationwide from January 1 to April 27, 2019. The distribution of cases for 2019 compared to epidemic and alert thresholds is shown below (Figure 4).

Figure 4. Reported Cholera Cases by Morbidity Week (N=2,365)
Morbidity Weeks 1-17 (January 1 - April 27, 2019) vs Epidemic and Alert Thresholds

Geographical Distribution

There was a 205% increase of reported cholera cases from 776 cases in 2018 to 2,365 cases in 2019. Regions VIII (1,726 or 73%) reported the highest number of cholera cases from January 1 – April 27, 2019 (Table 4).

Profile of Cases

Almost equal distribution of reported cholera cases in males (1,194 or 50%) and females (1,171 or 50%) was noted. Age of suspect cases ranged from less than 1 month to 92 years old (median age of 6 years). The most affected age groups were 1 to 4 years (736 or 31%) followed by less than 1 year (355 or 15%) (Figure 5).

![Figure 5. Reported Cholera Cases by Age Group and Sex (N=2,365) Philippines, January 1 to April 27, 2019](image)

**Laboratory Results**

A total of 659 (28%) samples were collected for laboratory testing (Figure 6). Of these, 4 (1%) yielded positive for *Vibrio cholerae*.

![Figure 6. Cholera Cases by Laboratory Result (N=2,365) Philippines, January 1 – April 27, 2019](image)

Profile of Deaths

Two deaths (CFR=0.08%) out of the 2,365 reported cholera cases were reported from Region V (Masbate and Sorsogon). Both cases are female with the age of 24 and 56 years old.

*Case counts reported here do NOT represent the final number and are subject to change after inclusion of delayed reports and review of cases. All 2018 data reflects partial data only of all regions. III. Hepatitis A

A. Reported Cases

Trend in the Philippines

A total of 336 reported acute viral hepatitis cases were reported nationwide from January 1 to April 27, 2019. The distribution of cases for 2019 compared to epidemic and alert thresholds is shown below (Figure 7).

Figure 7. Reported Acute Viral Hepatitis Cases by Morbidity Week (N=336)
Morbidity Weeks 1-17 (January 1- April 27, 2019) vs Epidemic and Alert Thresholds

Geographical Distribution

There was a 36% decrease of reported acute viral hepatitis cases from 522 cases in 2018 to 336 cases in 2019. Most of the reported cases were from the following regions: Region IX (60 or 18%), Region VI (49 or 15%) and Region X (48 or 14%) (Table 6).

IV. Rotavirus

A. Reported Cases

Trend in the Philippines

A total of 1,167 reported rotavirus cases were reported nationwide from January 1 to April 27, 2019. The distribution of cases for 2019 compared to the 4-year average of cases from 2015-2018 is shown below (Figure 11).

Figure 11. Rotavirus Cases by Morbidity Week and Case Classification (N=1,167) Philippines, January 1 - April 27, 2019 vs 4 Year Average Data

*Same time period

Geographical Distribution

There was a 15% increase of reported Rotavirus cases from 1,014 cases in 2018 to 1,167 cases in 2019. Most of the reported cases were from the following regions: Region I (353 or 30%), Region V (272 or 23%), Region VIII (131 or 11%), ARMM (103 or 9%) and Region XII (90 or 8%) (Table 8).

Note: 5 cases with unspecified age are not reflected in the graph.

Vaccination Status

Majority of reported rotavirus cases were not vaccinated with rotavirus vaccine (1,143 or 98%). Meanwhile, there were vaccinated cases as follows: 1 dose (4 or 0.3%), 2 doses or more doses (9 or 0.8%) and vaccinated with unknown number of dose (11 or 0.9%).

Laboratory Results

A total of 648 (56%) samples were collected for laboratory testing. Of these, 260 (40%) were laboratory confirmed for rotavirus and 267 (41%) were negative (Figure 13).

![Figure 13. Reported Rotavirus Cases by Laboratory Status (N=1,167)
Philippines, January 1 – April 27, 2019](image)

Profile of Deaths

Eight deaths (CFR=1%) out of the 1,167 reported rotavirus cases were reported from Regions I (3 cases), V (1 case), XII (2 cases) and ARMM (2 cases).

*Case counts reported here do NOT represent the final number and are subject to change after inclusion of delayed reports and review of cases. All 2018 data reflects partial data only of all regions. Total percentages may not add up to 100 due to rounding off of figures. A PDF file of this report is available at [www.doh.gov.ph/statistics](http://www.doh.gov.ph/statistics).
B. Confirmed Cases

Geographical Distribution

There was a 22% decrease of confirmed Rotavirus cases from 334 cases in 2018 to 260 cases in 2019. Most of the reported cases were from the following regions: Region I (172 or 66%), Region V (23 or 9%) and Region VI (22 or 8%) (Table 9).

Profile of Cases

Age Group and Sex

Majority of the confirmed cases were male (161 or 62%). Age of cases ranged from less than 1 month to 4 years old (median age of 1 year). Most of the cases were 1 year old (92 or 35%) (Figure 14).

V. Typhoid Fever

A. Reported Cases

Trend in the Philippines

A total of 6,923 reported typhoid fever cases were reported nationwide from January 1 to April 27, 2019. The distribution of cases for 2019 compared to epidemic and alert thresholds is shown below (Figure 15).

Figure 15. Reported Typhoid Cases by Morbidity Week as of January 1-April 27, 2019 (N=6,923)

Geographical Distribution

There was a 4% increase of reported typhoid fever cases from 6,638 cases in 2018 to 6,923 cases in 2019. Most of the reported cases were from the following regions: Region X (1,102 or 16%), Region XII (881 or 13%), CAR (812 or 12%), Region VI (799 or 12%) and Region IV-A (516 or 7%) (Table 10).

Profile of Deaths

Fourteen deaths (CFR=0.2%) out of the 6,923 reported typhoid fever cases were reported from Regions II, IV-A, VI, VII, VIII, IX, XII and ARMM. Age range from 7 days to 73 years old (median: 40 years).

*Case counts reported here do NOT represent the final number and are subject to change after inclusion of delayed reports and review of cases. All 2016 data reflects partial data only of all regions. Total percentages may not add up to 100 due to rounding off of figures. A PDF file of this report is available at www.doh.gov.ph/statistics.
B. Confirmed Cases
Geographical Distribution

There was a 60% increase of confirmed typhoid fever cases from 85 cases in 2018 to 136 cases in 2019. Most of the reported cases were from the following regions: Region VIII (27 or 20%), Region IX (20 or 14%), Region II (19 or 14%), Region VII (18, 13%) and ARM (13 or 10%) (Table 11).
